

CUSTOMER & MVP BLUEPRINT

StudyOS · AI-Powered Student Productivity Platform

Prepared for: Rishi Kumar Kar | June 2026 | India EdTech / Productivity SaaS

■ Source: Startup Validation Report (June 2026) — Extracted: Startup Idea, Problem, Target Customers, Competitor Analysis, Validation Insights. Overall Score: 74/100 · Recommendation: CONDITIONAL GO ■

78/100	82/100	64/100	55/100	MVP Readiness
--------	--------	--------	--------	---------------

Executive Summary

StudyOS is an AI-native student productivity platform targeting 40M+ college students in India. It consolidates deadline tracking, AI-generated study plans, note organisation, internship management, and learning resources into one tool built specifically for the Indian academic context — a gap no current global or local tool fills.

Startup Idea	AI productivity OS for Indian college students	Build for B.Tech / BCA students first
Core Problem	5–8 app fragmentation; missed deadlines; no AI study planner	Single deadline + study plan in MVP v1
Target Customer	Tier 2–3 college students, Android-first, █49–99 WTP	Mobile-first PWA; freemium entry
Top Competitor Gap	Notion/ToDoist are generic; no India context, no AI automation	India plan context + AI plan = moat
Validation Stage	Peer conversations only; no formal users or waitlist	50 interviews before coding
Biggest Risk	Adoption drop-off within 1 week	Nail Day 1 onboarding as #1 priority

Ideal Customer Profile & Buyer Persona

ICP Attribute	Profile	
Student Type	B.Tech / BCA / BSc IT — Year 1–3	Arjun Mishra · B.Tech CSE Y2 · Age 19–21 "I have 3 exams, an internship task, and a lab I forgot. I need help." Goals: 8+ CGPA · crack placements · DSA consistency · zero missed deadlines Frustrations: WhatsApp deadlines buried · study plans collapse in 3 days · notes everywhere · no time visibility Behaviour: Phone 80×/day · 2 hrs YouTube · ChatGPT for code · follows productivity influencers
College Tier	Tier 2 & 3 engineering colleges, India	
Geography	Odisha, AP, Telangana, Karnataka, Maharashtra	
Device	Android (█8K–█20K); Chrome browser	
App Usage	5–8 apps daily; ChatGPT-aware	
Pain Frequency	Misses 1+ deadline/week	
Current Tools	Notion (lapsed), WhatsApp, paper diary	
WTP	█49–█99/month post value-proof	

Top 10 Customer Pain Points

1	Forgetting assignment deadlines	█ Critical	Daily	█ BUILD
2	No AI-generated study plan	█ Critical	Every exam	█ BUILD
3	Notes scattered across 5+ apps	█ High	Every class	█ BUILD (v1 lite)
4	Internship + academic task conflict	█ High	Internship season	█ v2
5	Zero study time visibility / analytics	█ Medium	Weekly	█ v2

6	PDF/video summarisation effort	■ Medium	Exam prep	■ v2
7	Goal setting with no accountability	■ Medium	Monthly	■ v3
8	Placement prep + academic juggling	■ High	Year 3+	■ v2
9	Resource discovery & resurfacing	■ Medium	Ongoing	■ v3
10	CGPA tracking & progress analytics	■ Medium	Semester-end	■ v3

Customer Journey · Awareness → Retention

Stage	Trigger	Emotion	StudyOS Action	Success Signal
■ AWARE	Instagram reel / friend referral	Curious, FOMO	Relatable content; 'made for India'	Landing page visit
■ CONSIDER	Visits landing page; compares	Skeptical 'will I use it?'	Demo video <90s; India-context	Waits sign up
■ SIGN UP	Creates account; enters first details	Excited but cautious	3-min onboarding wizard; instant plan	Deadline added
■ ACTIVATE	AI generates first study plan; gets started	Optimistic 'it works'	Plan in <10s; WhatsApp/email reminders	Day 3 return
■ RETAIN	Returns daily; tracks progress	Habit forming	Streak + weekly report; social share	7-day retention >30%
■ CONVERT	Exam season — hits free-tier limit	Willing to pay	Smart upgrade prompt; 99/month	Payment completed
■ ADVOCATE	Shares with batch WhatsApp group	Proud early adopter	Referral reward; campus ambassador	Satisfied user

Key Objections & Buying Triggers

Objection	Counter	Trigger	Hook
"Notion is free"	Show 3 India-specific features Notion can't do	■ Exam panic	Instant AI study plan for next 2 weeks
"I'll stop using it"	Onboarding <3 min; streak system; weekly report	■ Missed deadline	Never miss one again — emotional CTA
"Why pay?"	Freemium first; paywall only after proven value	■ Friend shows it	FOMO + social proof = viral loop
"Is my data safe?"	No data selling; privacy-first; DPDP Act comp	■ Placement prep start	All-in-one tracker for DSA + resume + deadlines
"College has LMS"	Personal layer on top — not a replacement	■ Influencer content	"Top tools for B.Tech students" video

MVP Recommendation

What to Build First (MVP v1 — 30 days)

Feature	Why It's #1	Tech Stack Hint
Smart Deadline Tracker	Solves #1 pain point; daily use habit; easy to build fast	Next.js + Supabase + cron reminders
AI Study Plan Generator	Biggest market gap; wow factor; key differentiator vs Notion	OpenAI API + date-range input form
Lightweight Note Organiser	Ties deadlines to content; drives stickiness	Markdown editor + tag system

What NOT to Build in MVP

CGPA analytics dashboard	Nice-to-have; data not available at sign-up; build in v3
Collaborative study rooms	Complex infra; user base too small; not core pain
Mobile app (iOS/Android)	PWA is sufficient for MVP; ship web first, app later
Vernacular / multi-language UI	Adds dev complexity; English-first is fine for Tier 2 colleges
Social / community features	Distraction from core productivity value; pivot option only
Placement prep module	Separate problem scope; scope-creep risk; v3 or pivot

MVP Success Metrics

Metric	Target (Day 30)	What It Proves
Waitlist signups	100+	Problem resonance + distribution channel works
Beta active users	50+	Product usable enough for real adoption
D7 retention	>30%	Habit formation — product has stickiness
AI study plan generations	200+	Core feature is discoverable and used
NPS (qualitative)	>7/10 avg	Willingness to recommend = PMF signal
WTP conversion (beta tier)	5–10 signups	Validates ₹49–99/month pricing hypothesis

MoSCoW Prioritisation

MUST HAVE
• Smart deadline tracker with reminders (WhatsApp / email / push)
• AI study plan generator (syllabus input → day-wise plan)
• User authentication & basic profile
• Mobile-responsive PWA (Android Chrome)
• Frictionless onboarding in <3 minutes
SHOULD HAVE
• Lightweight note organiser with tags
• Study streak & progress tracker
• Weekly study summary email digest
• Waitlist → invite flow for referral growth
• Basic analytics (DAU, plan usage, retention)
COULD HAVE
• AI PDF/video summariser (via OpenAI)
• Internship + project task board
• Goal tracking with milestone alerts
• CGPA calculator & grade tracker
• Dark mode & customisable dashboard
WON'T HAVE (v1)
• Native iOS / Android app
• Collaborative / social features
• Placement prep module
• Vernacular language support
• Institutional / college admin dashboard

Pricing Hypothesis & Top 5 Risks

Pricing Hypothesis

Tier	Price	Features	Target User
Free	■0/month	5 deadlines, 1 AI plan/week, basic notes	All students — acquisition tier
StudyOS Pro	■99/month	Unlimited deadlines, daily AI plans, full notes, summaries	Power users; exam-season converts
StudyOS Plus	■499/semester	Pro features for 6 months (20% saving)	Students who plan ahead; budget-conscious
Institutional	■5–50L/year	White-label for colleges; admin dashboard	Pivot path; B2B2C model

Top 5 Risks

■	Adoption Drop-off	HIGH	HIGH	Build streak, daily reminders, 3-min onboarding as Day 1 priority
■	Low WTP / Free-Tool Lock-in	HIGH	MED	Prove value via freemium; introduce paywall only at Day 14+
■	Solo Founder Bandwidth	MED	HIGH	Ruthlessly scope MVP to 3 features; recruit beta co-builder
■	AI API Cost Overrun	MED	MED	Cap free plan API calls; monitor cost per user from Day 1
■	Notion Adds India Template	LOW	MED	Deepen India-context moat; CGPA, semester, placement as differentiators

30-Day MVP Plan

W1 Days 1–7	• 20 structured user interviews (not just friends — use college groups) • 50+ survey responses via Google Form in WhatsApp/Telegram groups • Define MVP scope: Deadline Tracker + AI Study Plan + Basic Notes only • Pick tech stack: Next.js + Supabase + OpenAI API (or Gemini) • Set up GitHub repo, project board, and weekly shipping cadence ✓ 20 interviews done · top 3 pain points confirmed
W2 Days 8–14	• Ship a landing page (Framer free tier) with clear value prop • Add waitlist form (Tally.so) — target 100 signups • Post 3 Instagram reels / LinkedIn posts showing the student problem • Share in 10+ college WhatsApp groups, Reddit r/india, LinkedIn • Begin building Deadline Tracker UI (no AI yet) ✓ 100 waitlist signups · landing page live
W3 Days 15–21	• Ship MVP v0.1: Deadline Tracker + AI Study Plan (OpenAI API) • No auth required — URL-based or Google login only • Invite 15 waitlist users; run 5 recorded feedback sessions • Fix top 3 UX issues within 48 hrs of feedback • Add basic analytics: Plausible or Mixpanel free tier ✓ 15 beta users · AI plan generated 50+ times
W4 Days 22–30	• Ship v0.2 with top beta fixes + streak tracker • Soft launch to full waitlist • Track: DAU, D7 retention, feature usage heatmap • Run 5 one-on-one calls with power users • Decide: continue side project · escalate to startup · or pivot ✓ 50 active users · D7 retention >30% · 5+ WTP signals

Founder Action Sheet · Top 10 Next Actions

#	When	Action
1	TODAY	Write your user interview script (10 open-ended questions about deadline + study pain)
2	Day 1–3	DM 30 students in your college network to schedule 20-min interviews
3	Day 2	Create Google Form survey — share in 5 college WhatsApp groups immediately
4	Day 3–5	Pick tech stack. Set up Next.js project + Supabase DB + OpenAI API key
5	Day 5	Register domain (studynos.in ~₹800/yr) + set up GitHub + project board
6	Day 7	Finalise MVP scope based on interview data — max 3 features, written down
7	Day 8	Launch Framer landing page + Tally waitlist form
8	Day 10	Ship Deadline Tracker v0 (no AI yet) — get 5 classmates to try it today
9	Day 15	Add OpenAI study plan API — test with real syllabus from your own sem
10	Day 21	Invite 15 beta users — run 5 recorded sessions — fix top 3 issues fast

Scores & Final Verdict

Customer Clarity	78	ICP and persona are well-defined; interview data needed to confirm
Problem Severity	82	Daily, painful, frequent — strong signal from validation report
PMF Potential	64	Real gap exists; stickiness unproven — retention data will confirm
MVP Readiness	55	Technically capable; scope must be ruthlessly narrowed to 3 features

FINAL VERDICT

Why this verdict?

PROMISING BUT UNVALIDATED

The problem is exceptional. However, the solution is unserved. Hence, the retention data is not sufficient.
